Operating Systems	Linux, Windows 7,8,10, Xp,

Education

Programming and Web Technology, Attestation of College Studies

2019 – till date

Institut Supérieur d'Informatique - Montreal

Computer Science and Engineering, Bachelor;s Degree

2014 – 2018

Guru Nanak Dev University – India

Projects

J2EE | Battleship Game Application

<https://github.com/deekshadeeksha/BattleshipGame.git>

- 2D platform game created using Swing library.
- Dynamic menu lets user choose its opponent either human or computer
- Separation of concerns using MVC software design pattern.
- UI that lets user interact with buttons and play game resulting in loss or win.
- Ships are randomly relocated at the beginning of each game.

React, Node.js | Playlist Website

<https://github.com/deekshadeeksha/DiscogAPI.git>

- Website developed for music playlist creation, where user can search for a song and add it to the playlist and modify that playlist.
- Node used to handle API services, in the project for music discog API was used.
- REST used on the server side to connect client with server with HTTP standard methods.
- React used to create interactive UI displaying the music gathered from API and also from the database
- Part of a three-programmer team where my part involved REST, node and database handling.

Android | Learning Application for kids

<https://github.com/deekshadeeksha/LearningApp.git>

- Application developed for kids needs to enhance their learning and cognitive ability.
- Extensive and interactive UI with colors and graphics pertaining to young minds
- Different levels provided for different levels of learning.
- Involves small games like puzzles and matching

J2EE | E - Commerce Web Application

- Shopping website created using various libraries of Java like Swing, Awt and Hibernate.
- Has connection to MySQL database.
- Contains three basic divisions – user, admin and seller.
- The various elements displayed picked directly from database making it dynamic with editing rights to admin.
- The data collected about purchase, sales, inventory, user and seller record kept and stored in database and can be edited as necessary from the front end.
- Part of a three-programmer team, where my part involved handling user and admin divisions.

Java, HTML, CSS | Book E – Shop

- Web Application for selling books online and searching for books in the google libraries.
- Designed using HTML, CSS and JavaScript .
- Back end designed using various Java libraries and MySQL database used for storage and with MVC software design pattern.
- Google API used to create a library feature for user to search books and add them to database.

HTML, CSS | Health Lifestyle Website Design

- A website designed focusing on healthy lifestyle and keto diet.
- Design involved the use of both CSS and SASS.
- Varied features of CSS like selectors, flex box, animation, layouts, graphic effects used to create four-page website.
